Reasons for Allowance

The following is an examiner's statement of reasons for allowance: Applicants' method for producing a chlorinated hydrocarbon compound according to the present formula 2 is unobvious over the prior art of record. Although the closest prior art of record (JP 10-175892) teaches a method for producing a chlorinated hydrocarbon, according to the present formula 2, comprising reacting a hydroxyl compound, represented by the present formula 1, with aqueous hydrochloric acid, the closest prior art of record does not teach or suggest separating an organic layer, after the reaction of the hydroxyl compound and aqueous hydrochloric acid, followed by contacting the said organic layer with hydrogen chloride gas. Such a modification allows for obtaining the chlorinated hydrocarbon compound in a greater purity as evidenced by applicants' comparative results. The treatment of the separated organic layer with hydrogen chloride gas would not have been obvious to one having ordinary skill in the art when considering the possibility that the desired product could have been render more impure from the hydrogen chloride gas treatment as a result of the desire product becoming over chlorinated. All claims (1-19, 23-29 and 34-38) are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
